EDUCATION

California State University, San Bernardino

Bachelor of Science in Computer Engineering, 3.45/4.0 GPA

San Bernardino, CA

Aug. 2019 - May 2023

EXPERIENCE

Automated Systems Technician

November 2024 – Present

San Bernardino County - Behavioral Health Department

San Bernardino, CA

- Develop and maintain SQL queries to prepare, analyze, and publish data for the Behavioral Health Management Information System, ensuring alignment with business rules and system controls.
- Configure, test, and document system settings, custom forms, and configurations within myAvatar, supporting smooth deployment and troubleshooting.
- Resolve system control issues through Help Desk support, troubleshooting technical challenges, and assisting end-users.

Software Engineer Fellow

July 2024 – Sep. 2024

Headstarter AI

Remote

- Developed a Pantry Tracker application using ReactJS, NextJS, and Firebase following CRUD operations
- Built a Flashcard web application utilizing Stripe API, initially hosted on AWS EC2 and later migrated to Vercel. Implemented a subscription page using Stripe API for payment processing
- Engineered the backend infrastructure for an AI complaint detection web app using Flask, SQLAlchemy, and PostgreSQL, advancing to the finalist round in a hackathon

Backend Engineer Intern

Sep. 2023 - Dec. 2023

nGap Incorporated

Bonsall, CA

- Prototyped and developed backend services in a microservice environment using Docker, Python, and RabbitMQ, including RESTful API endpoint creation with Flask for seamless communication
- Documented backend APIs using Swagger and facilitated integration with Swagger UI, ensuring readability and smooth developer collaboration
- Implemented an asynchronous consumer and producer with C# and RabbitMQ to process sensitive documents encoded in base64, enriching the data within the Transformation layer of ETL
- Utilized CRUD operations to develop business logic for user-generated records, using SQL and Python's ORM SQLAlchemy

iOS Developer Intern

May 2023 - Aug. 2023

MDNR Energy Technolog LLC

Remote

- Developed an iOS application with SwiftUI along with the MVVM architecture, integrating real-time API updates resulting in a 25% efficiency boost in power consumption
- Implemented NSNotifications for power system tracking, resulting in a decrease of inefficiencies by 30%, cutting unnecessary costs through timely alerts for deviations
- Visualized power consumption data throughout the day by generating interactive graphs, enabling users to intuitively visualize and analyze power consumption patterns for informed decision-making to maintain efficiency in power consumption

PROJECTS

DevFolio | [Live](#) | [GitHub](#)

Sep. 2024

- Developed robust backend services using Python and SQLite, implementing user authentication and managing relational data for profile information in a developer portfolio web app
- Created and optimized multiple RESTful API endpoints using FastAPI, ensuring efficient handling of CRUD operations and smooth user interactions with data
- Deployed backend services on Render, ensuring reliable and scalable access for end-users

TECHNICAL SKILLS

Languages: Python, Swift, C#, SQL (MSSQL, Postgres, SQLite), Firebase, JavaScript, HTML/CSS

Frameworks: Flask, React, Tailwind CSS

Developer Tools: Git, Docker
